

# **RPM: Remote Patient Monitoring**

Group 6: Amelie, Eleonora, Kacey, Jerry, Rick, Sherry

# Background

## Client Problem

At the UVic Health Authority, across multiple home-based care departments, patients and clinicians have expressed a desire for a sophisticated remote patient monitoring device that records patient vitals and can open voice communication between patients and providers

## Some Issues with Existing Solution

- Patients unsatisfied with health vital recording device (too bulky and heavy)
- Clinicians having difficulty navigating data monitoring interfaces
- Not user-friendly
- Impeding clinical workflow

## Analysts

### BGW Analyst

A vibrant team of professionals with a wide range of skills in health information and computer science

## Clients

### UVic Health Authority

Our goal is to provide timely, effective, and high-quality care to our patients anywhere, any time

Amelie Wang | System Analyst

Sherry Gu | System Analyst

Jerry Jiang | System Analyst

Rick Kuang | System Analyst

Eleonora Stoyanova | Client

Kacey Friesen | Client

# Goals & Objectives

## Improve Patient Satisfaction

Provide a solution that elevates quality of care and overall health care experience

## Improve Interoperability

Smoothly integrate patient recording device with provider information system

## Improve Patient Safety

Implement accident alerting system with GPS function

## Improve Communication

Provide voice-calling function

## Improve Care Provider Satisfaction

Provide solution that does not create additional burden on care team

## Improve Stakeholder Satisfaction

Provide survey for stakeholder feedback per request

# Requirements

## Business Requirements

The system should improve patient health outcomes and satisfaction

## Business Rules

The system must comply with all relevant privacy and security regulations

## User Requirements

The system should offer multilingual support, allowing users who speak different languages to use it without language barriers

## Functional Requirements

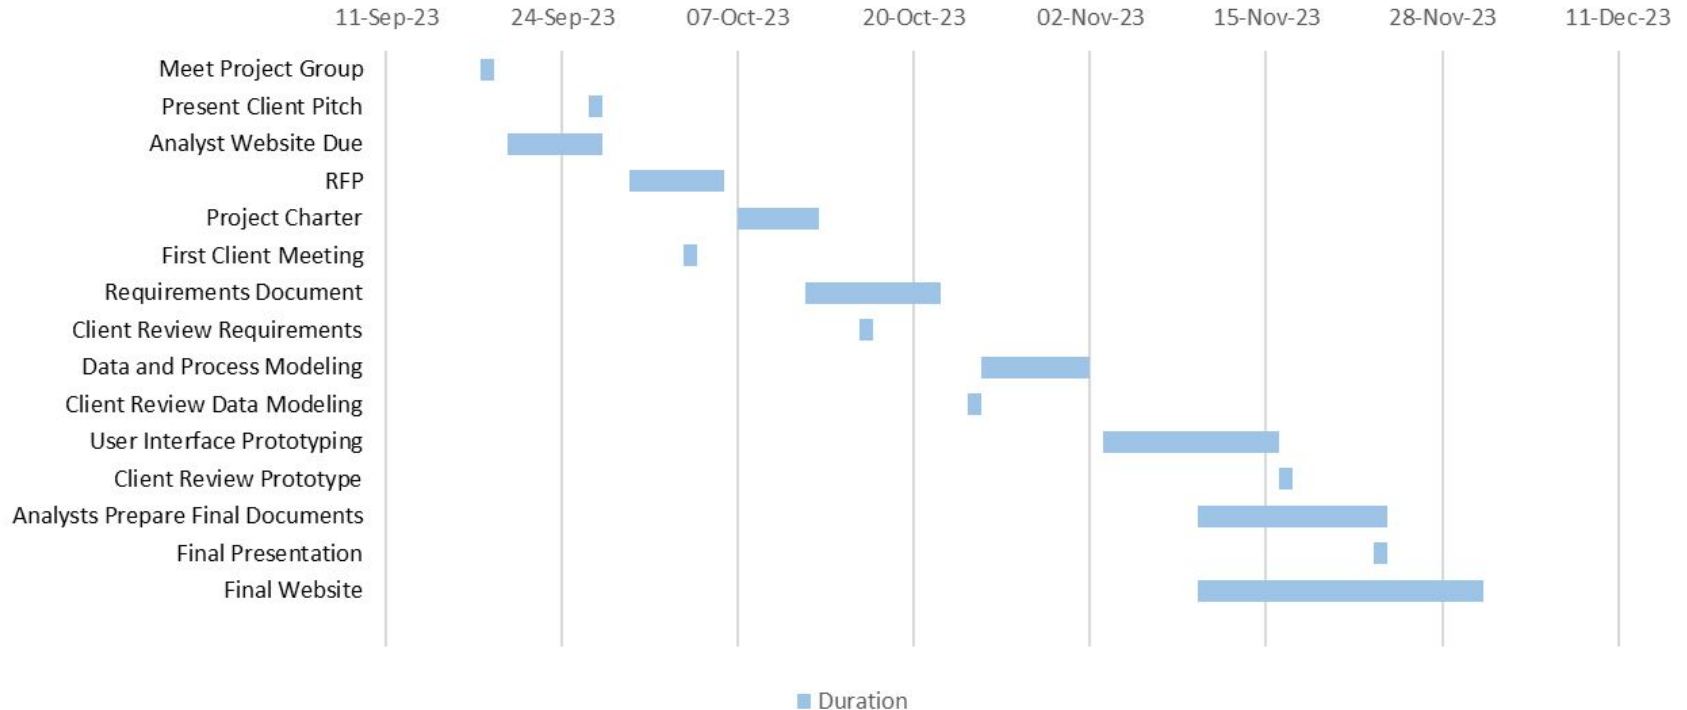

The system is required to ensure security during logon, both at the level of the operating system and within the application itself

## Non- Functional Requirements

Patients and healthcare providers need to be able to easily access and use the system

# Project Schedule

# Sequence Diagram

# Sequence Diagram

# Use Case Diagram: Abnormal Patient Vitals Detected

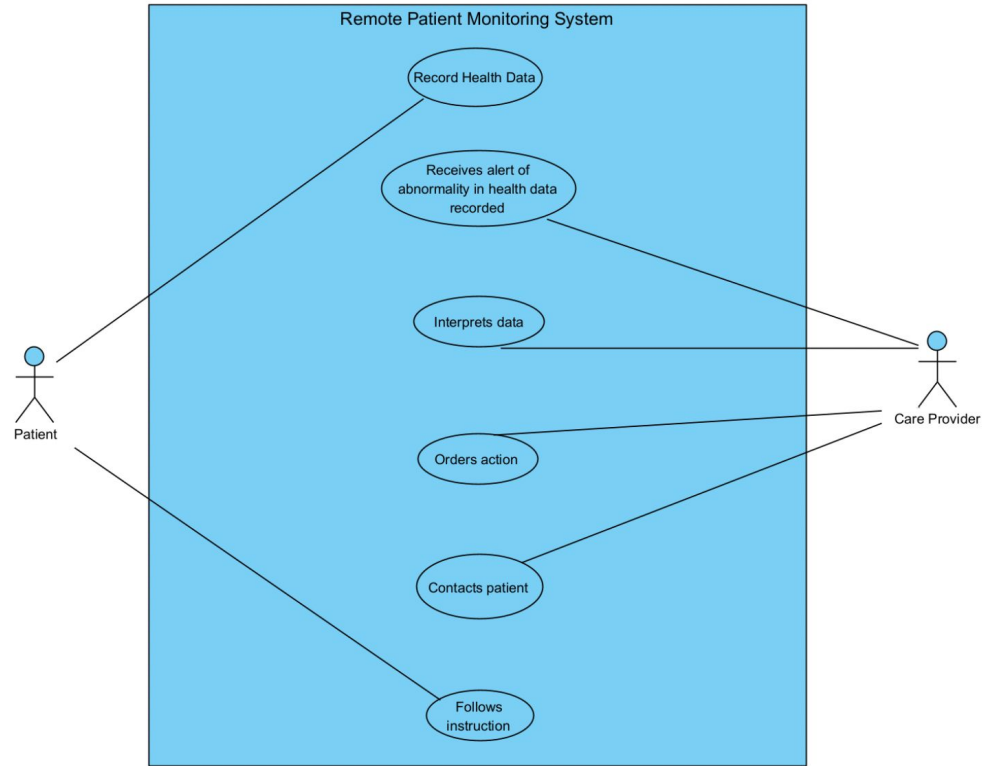

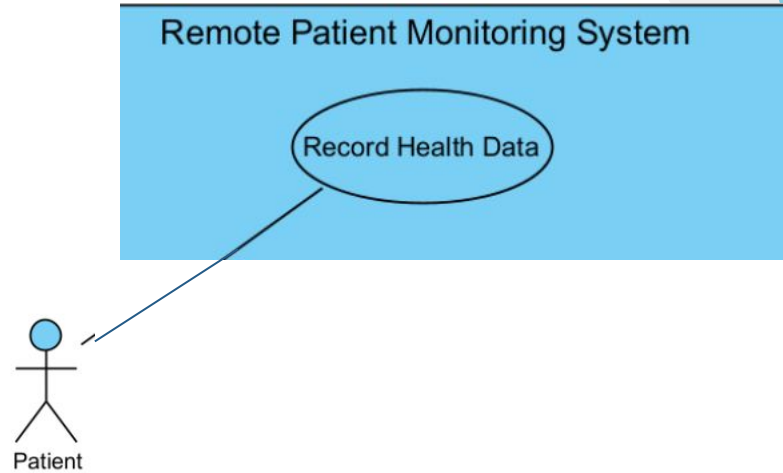

Figure 1 Remote Patient Monitoring System Use-Case Diagram

Step 1: The patient records health data using the device

Step 2: The system generates an alert of abnormal patient vital values and sends it to the care provider

Step 3: Care provider interprets health data

Step 4: Based on data interpretation, care providers order interventions (ex. order tests)

Step 5: Care provider contacts patient about further required action

Step 6: Patient follows the instructions provided by the care provider

# Benefits of Our RPM Solution

- Increased patient and provider satisfaction
- Reduced time care providers spend interpreting patient health vital reports
- Decreased hospitalization rates
- Reduced severity of patient conditions
- Increased care team acceptance

# How Our RPM Solution Adds Value To The Market?

## Intuitive Interface

*Device:* using a smartwatch to track health is easy to use and non intrusive on the patient

*Dashboard:* RPM dashboard is sleek and intuitive to learn and understand, making the monitoring process very quick

## Vastly Improves Patient Outcomes

Having care providers immediately alerted upon a patient's change in health status allows them to quickly respond to the situation and save lives

## Streamlines Workflow

Allows care providers to track and monitor all health vitals in one place (BPM, BP, oxygen levels, temperature, falls)

# Summary

- Remote Patient Monitoring for UVic Health Authority is a comprehensive project that aims to address current problems and challenges faced by both patients and the healthcare providers when it comes to monitoring health conditions at a distance
- Our solution improves patient safety and satisfaction while enhancing quality of care through introducing an alerting system, voice calling function and can be integrated into with other existing health systems
- This project highlights UVic Health Authority's commitment to leveraging technology to improve healthcare outcomes and experiences for all

**THANK YOU!**
